Name: _____ **Date:** _____

DIRECTIONS

This Independent Practice is for Lesson 4.15.03.
Use a protractor and a sharp pencil.
Center mark on the vertex. Flat edge along the ray. Find the 0 on the ray, mark your number, draw the ray.
Label each angle with its measure. Check it with an estimate.

1 Draw from a ray

(a) Draw a 45° angle on this ray.

(b) Draw a 120° angle on this ray.

2 Right and straight

(a) Draw a 90° angle.

(b) Draw a 180° angle.

(c) How is a straight angle different from a right angle? _____ _____ _____

3 Which row?

Wren wants to draw a 160° angle. Her ray points to the right from the vertex.

(a) Should she count from the row that says 0 on the right, or the row that says 0 on the left?

(b) What angle will she draw if she uses the other row by mistake?

FIND THE 0 ON YOUR RAY

(a) _____ _____ **(b)** _____ °

4 Two angles on one line

This straight line is a 180° angle. Draw a ray from V so the angle on the right is 75°.

Then measure the angle on the left.

The angle on the left measures _____ °. What do you notice? _____ _____
